

Project Initiation: KSUMB Attendance

1. Information

- **Project Name:** KSUMB Attendance System
- **Project Sponsor/Client:** Dr. Alexander Wimmer; Director of Bands
- **Stakeholders:** KSUMB Members, KSUMB Staff/Student Staff, KSU IT
- **Project Manager(s):** Cameron Nelson
- **Date Authorized:** February 5, 2026

2. Business Case

Purpose: Justify why we are moving from paper to digital and if it is worth the effort.

- **Problem Statement:** The KSUMB currently relies on a manual attendance system for its 400+ members. Latecomers must physically sign a book at the front of the field, creating a bottleneck at the 3:30 PM rehearsal start. Excused absences require physical "Pink Forms" (24-hour notice) or "Yellow Forms" (class conflicts), leading to high administrative overhead, potential data entry errors, and lost rehearsal time for students and staff.
- **Options Considered:**
 - **Option A (*Do Nothing*):** Continue with paper forms.
 - *Pros:* No development cost.
 - *Cons:* Continued data latency, administrative burden on staff, and risk of lost forms affecting student grades.
 - **Option B (*Off-the-Shelf App*):** Purchase a generic attendance app.
 - *Pros:* Immediate availability.
 - *Cons:* Recurring licensing costs; may not handle specific KSUMB logic (e.g., "Pink" vs. "Yellow" form workflows).
 - **Option C (*Custom KSUMB Solution - Recommended*):** Build a tailored web/mobile application.
 - *Pros:* Exact fit for KSUMB workflow (e.g., GPS geofencing for "The Pride" practice field), one-time build cost (student project), high strategic alignment.
 - *Cons:* Maintenance and development time. Potential Recurring licensing costs
- **Strategic Alignment:** Supports the efficient operation of a 450+ member organization and ensures accurate accountability through a user friendly interface

Recommended Option: Option C (Custom Solution). It allows for the greatest flexibility and provides a path to further development past attendance (sign-up, inventory, announcements, etc.)

3. Vision Statement

Purpose: Provide a clear, concise picture of the future state for Dr. Tracz and the band members.

"To empower the 400+ members of the Pride of Wildcat Land with a seamless, mobile-first attendance system that allows for instant, automated, and verifiable check-ins at scheduled required events. This solution aims to replace the manual paper check-in and Pink and Yellow forms with a transparent digital workflow, giving Directors and Student Staff real-time visibility into roster readiness so they can focus on music and marching."

4. Project Charter

Purpose: Officially authorize the project and the MIS 677 Student Team.

A) Project Objectives

- Cut down on the administrative overhead for KSUMB Staff by 30 minutes each required event.
- Improve check-in rate and accuracy for required events with a user friendly interface.
- Integrate the "Pink sheet" (absence) and "Yellow sheet" (conflict) approval workflows and exception handling.
- Provide real-time and consolidated attendance reporting and for participation accountability.

B) High-Level Scope (In-Scope)

- **Mobile:** Designed especially for handheld devices with desktop capabilities.
- **Role based views:** Staff, section leader, member views.
 - **Staff:** Real-time dashboard for big picture information. Includes section views and per user history views
 - **Section Leaders:** Dynamic section roster view to check-in section members. Includes pictures, and exception information
 - **Members:** Self-check-in and history

- **Data integration:** Bulk import of student data, staff management tools to edit user information, roles, and attendance record

C) Out of Scope

- Integration with university Registrar systems (KSIS) for automatic roster, class, and schedule importing (probably).
- Sign-Up system for pep-bands.
- Consideration for other band programs (Wind Symphony, Concert Band, etc.)
- Calendar view for all events.

D) Constraints & Assumptions

- **Constraints:**
 - FERPA data guidelines
 - University environment and domain restrictions (Central IT, SSO, KSIS)
 - System must handle high traffic (400 requests) simultaneously at ~3 PM.
 - Must work outdoors with potentially variable cellular data at the stadium.
- **Assumptions:**
 - Band members have access to a smartphone.
 - University resources and cooperation (SSO, KSIS, M365)
 - Off-the-shelf solutions don't fit requirements and/or are unavailable.
